

1. **Generate and Plot Two Random Vectors:**

- a. Create two vectors, each containing 15 random floats of your choice.
- b. Plot these vectors on the same graph using `matplotlib` to compare how they look.
- c. Label the axes appropriately and give the plot a title.

2. **Matrix Operations and Visualization:**

- a. Create two 4x4 matrices with random values of your choice.
- b. Perform the following operations:
 - i. Matrix Addition
 - ii. Matrix Subtraction
 - iii. Matrix Multiplication (ensure matrices are compatible for multiplication)
- c. For each of these operations, visualize the result using **bar plots**. Each bar should represent one element of the matrix.
